

Dr. Michael Heithaus is the Dean of the College of Arts, Sciences & Education (CASE), Professor in the Department of Biological Sciences and Marine Sciences Program and the Founding Executive Director of the School of Environment, Arts and Society (SEAS) at Florida International University (FIU). Dr. Heithaus is a nationally and internationally recognized scholar in marine ecology, specializing in large predators. He has authored over 120 publications and been awarded over \$3.6 million for his own research over the past decade. In addition, Dr. Heithaus has been active in community engagement, authoring several K-12 textbooks and developing video programs for national K-12 science and math programs. Dr. Heithaus received a B.A. in Biology from Oberlin College and completed his Ph.D. in Biological Sciences at Simon Fraser University, where he initiated the research that grew into the Shark Bay Ecosystem Research Project and developed many of his interests in the role of non-consumptive predator effects on marine community dynamics. During his time as a research fellow for National Geographic Society's Remote Imaging Lab, he conducted research around the world and hosted a television series. He was recently featured on this year's Animal Planet Channel shark week.
